Case Description: A solicited report has been received from a consumer in Patient Support Program concerning a female patient born in 1969.

No medical history was reported. No concomitant products were reported.

On 08-May-2024, the patient started treatment with Osimertinib (osimertinib) (batch number FKZM) (expiration date 31-Aug-2025) 80 milligram qd, Oral use for bronchial cancer and lung cancer with metastasis (the area of metastasis is not specified).

On an unknown date, the patient experienced sometimes blisters appear on her body (preferred term: Blister), her toenails and fingernails feel eaten away and infected/patient presents with terrible fingernails and toenails (preferred term: Nail infection), she's got teeth falling out (preferred term: Tooth loss), difficulty walking (preferred term: Gait disturbance), frustration (preferred term: Frustration tolerance decreased), poor concentration (preferred term: Disturbance in attention), forgetting things (preferred term: Memory impairment), inflammation (preferred term: Inflammation), patient presents pain in the legs (preferred term: Pain in extremity), patient presents dryness, mostly at night (preferred term: Dry skin), patient indicates that my hair is falling out (preferred term: Alopecia), patient indicates that he has mottled skin, mainly on the face (preferred term: Livedo reticularis), patient presents swollen joints (preferred term: Joint swelling), patient feels confused (preferred term: Confusional state), patient presents fatigue (preferred term: Fatigue), the patient indicates that he wears glasses because a small film is growing over both eyes, completely over the right eye and almost completely over the left eye (preferred term: Eye disorder), anxiety/patient presents anxiety attacks (preferred term: Anxiety), depression/patient indicates that he feels sad, as if he were very depressed (preferred term: Depression) and pain in her knees (preferred term: Arthralgia).

The dose of Osimertinib was not changed.

At the time of reporting, the event anxiety/patient presents anxiety attacks, depression/patient indicates that he feels sad, as if he were very depressed, forgetting things, frustration, her toenails and fingernails feel eaten away and infected/patient presents with terrible fingernails and toenails, pain in her knees, patient feels confused, patient indicates that he has mottled skin, mainly on the face, patient indicates that my hair is falling out, patient presents dryness, mostly at night, patient presents fatigue, patient presents pain in the legs, patient presents swollen joints, poor concentration, she's got teeth falling out, sometimes blisters appear on her body and the patient indicates that he wears glasses because a small film is growing over both eyes, completely over the right eye and almost completely over the left eye was ongoing. The outcome of the events of difficulty walking and inflammation was unknown.

The reporter assessed the events of the patient were the patient indicates that he wears glasses because a small film is growing over both eyes, completely over the right eye and almost completely over the left eye as serious due to medically significant criterion.

The reporter assessed the events of anxiety/patient presents anxiety attacks, depression/patient indicates that he feels sad, as if he were very depressed, difficulty walking, forgetting things, frustration, her toenails and fingernails feel eaten away and infected/patient presents with terrible fingernails and toenails, inflammation, pain in her knees, patient feels confused, patient indicates that he has mottled skin, mainly on the face, patient indicates that my hair is falling out, patient presents dryness, mostly at night, patient presents fatigue, patient presents pain in the legs, patient presents swollen joints, poor concentration, she's got teeth falling out and sometimes blisters appear on her body as non-serious.

The reporter considered that there was a reasonable possibility of a causal relationship between Osimertinib and the following events: anxiety/patient presents anxiety attacks, depression/patient indicates that he feels sad, as if he were very depressed, difficulty walking, forgetting things, frustration, her toenails and fingernails feel eaten away and infected/patient presents with terrible fingernails and toenails, inflammation, pain in her knees, patient feels confused, patient indicates that he has mottled skin, mainly on the face,

ADDITIONAL INFORMATION

7+13. DESCRIBE REACTION(S) continued

patient indicates that my hair is falling out, patient presents dryness, mostly at night, patient presents fatigue, patient presents pain in the legs, patient presents swollen joints, poor concentration, she's got teeth falling out, sometimes blisters appear on her body and the patient indicates that he wears glasses because a small film is growing over both eyes, completely over the right eye and almost completely over the left eye.

The company physician considered that there was a reasonable possibility of a causal relationship between Osimertinib and the following events: anxiety/patient presents anxiety attacks, depression/patient indicates that he feels sad, as if he were very depressed, difficulty walking, forgetting things, frustration, her toenails and fingernails feel eaten away and infected/patient presents with terrible fingernails and toenails, inflammation, pain in her knees, patient feels confused, patient indicates that he has mottled skin, mainly on the face, patient indicates that my hair is falling out, patient presents dryness, mostly at night, patient presents fatigue, patient presents pain in the legs, patient presents swollen joints, poor concentration, she's got teeth falling out, sometimes blisters appear on her body and the patient indicates that he wears glasses because a small film is growing over both eyes, completely over the right eye and almost completely over the left eye.

Summary of follow-up information received by AstraZeneca on 09-Jun-2025 from consumer via solicited source: New non-serious event, she's got teeth falling out added. Addition of a new reporter. Narrative updated.

Company Clinical Comment: Eye disorder is not listed in company core data sheet of Osimertinib. Underlying malignancies could be confounding. Due to limited information on onset date of the event, risk factors, details and circumstances surrounding the event, concurrent condition, concomitant medications, relevant family history, relevant medical history, detailed aetiological and diagnostic workup, the evaluation did not find evidence to exclude a causal relationship between the event and suspect drug.

The company physician considered that there was a reasonable possibility of a causal relationship between Osimertinib and the following events: anxiety/patient presents anxiety attacks, depression/patient indicates that he feels sad, as if he were very depressed, difficulty walking, forgetting things, frustration, her toenails and fingernails feel eaten away and infected/patient presents with terrible fingernails and toenails, inflammation, pain in her knees, patient feels confused, patient indicates that he has mottled skin, mainly on the face, patient indicates that my hair is falling out, patient presents dryness, mostly at night, patient presents fatigue, patient presents pain in the legs, patient presents swollen joints, poor concentration, she's got teeth falling out, sometimes blisters appear on her body and the patient indicates that he wears glasses because a small film is growing over both eyes, completely over the right eye and almost completely over the left eye.
