ADDITIONAL INFORMATION**7+13. DESCRIBE REACTION(S) continued**

Case Description: This is a spontaneous report and received from Consumer or other non HCPs, Program ID: 164974.

An 11-year-old female patient received somatropin (GENOTROPIN PEN), (Batch/Lot number: unknown) at 1 mg daily (1 mg, daily(at night)). The patient's relevant medical history and concomitant medications were not reported.

The following information was reported: DEVICE LEAKAGE (non-serious), described as "he device leaked medication when first inserted and the dosage was incorrect"; DEVICE DELIVERY SYSTEM ISSUE (non-serious), described as "the patient was supposed to get a dose of 10, but when she was turning the vial of the device, she realized that it only showed up to 3."; WRONG TECHNIQUE IN DEVICE USAGE PROCESS (non-serious), described as "she had a bad practice in administering the medication"; INCORRECT DOSE ADMINISTERED BY DEVICE (non-serious), described as "when first inserted and the dosage was incorrect". The action taken for somatropin was unknown.

Additional information: The patient's mother indicated that on the first day of the injection the medication spilled a little. The main problem occurred on the fifth day, when she went to administer the dose, she explained that the patient was supposed to get a dose of 10, but when she was turning the vial of the device, she realized that it only showed up to 3. Her consultation was to know what he should do in that situation. Reporter indicated that: "She was asking a question to the previous lady, since she had a bad practice in administering the medication." Reporter indicated that the device leaked medication when first inserted and the dosage was incorrect.

Causality for "he device leaked medication when first inserted and the dosage was incorrect", "the patient was supposed to get a dose of 10, but when she was turning the vial of the device, she realized that it only showed up to 3.", "she had a bad practice in administering the medication" and "when first inserted and the dosage was incorrect" was determined associated to device constituent of somatropin (malfunction).
