ADDITIONAL INFORMATION

7+13. DESCRIBE REACTION(S) continued

The following information was reported: HEADACHE (non-serious), outcome "unknown", described as "her head is hurting a lot"; INFLUENZA (non-serious), outcome "unknown", described as "seems to be a flu episode". The action taken for somatropin was unknown.

The information on the batch/lot number for somatropin will be requested and submitted if and when received.

Additional Information: A relative of the patient stated that "what happens was that a niece of mine was given the GENOTROPIN treatment for growth, and she tells me that her head is hurting a lot, I wanted to know what it could be." Counseling with nursing is coordinated as part of the benefits of the program. On 19Aug2025, a nurse reported the patient's mother had requested a consultation because the patient had mentioned she was experiencing a headache, nasal congestion, and flu-like symptoms. It seems to be a flu episode. Patient's mother was asked if it had anything to do with the product, and she said no, that everything was fine with the product. In fact, she had understood it well and said there had been no problem with it.

The information on the batch/lot number for somatropin will be requested and submitted if and when received.

Follow-up (19Aug2025): This is a spontaneous follow-up report received from a Nurse, Program ID: 164974 Updated information included: New reporter added, reaction data (new event "seems to be a flu espisode"); clinical course
