ADDITIONAL INFORMATION

7+13. DESCRIBE REACTION(S) continued

since 2025 (Lot number: LR7825, Expiration Date: May2027) at 0.8 mg daily (0.8 mg, daily (night time)). The patient's relevant medical history and concomitant medications were not reported.
The following information was reported: DEVICE PHYSICAL PROPERTY ISSUE (non-serious) with onset 2025, outcome "unknown", described as "pen was getting stuck in the part of the syringe"; INJECTION SITE PAIN (non-serious) with onset 2025, outcome "unknown", described as "the needle was hurting"; VOMITING (non-serious), outcome "unknown", described as "vomited twice"; NAUSEA (non-serious), outcome "unknown". The action taken for somatropin was unknown.

Causality for "the needle was hurting" and "pen was getting stuck in the part of the syringe" was determined associated to device constituent of somatropin (malfunction).

Additional information: As of 17Jun2025, caregiver reported that the pen was getting stuck in the part of the syringe, when she pricked it got stuck and the needle was hurting, it had only been 3 months with the pen. As of 19Jun2025, a reporter indicated that upon checking it, it was confirmed that the needle holder had a spring which had lost its strength and no longer applied pressure to the button. It was possible to put it already out of the refrigeration and out of the refrigeration it worked very well.

Follow-up (13Apr2025): Follow-up attempts are completed.

Follow-up (17Jun2025). This is a spontaneous follow-up report received from a consumer. Updated information included: dose description, new events "pen was getting stuck in the part of the syringe" and "the needle was hurting" were added; clinical course updated.
