5) SUFFERED A FALL LEAVING THE BATHROOM/Patient refers that from the fall of 25-Feb-2025 he still does not feel recovered (Fall (10016173), Fall (10016173)(25/Feb/2025 -) - Not Recovered/Not Resolved/Ongoing)

6) BECAUSE OF THE FALL HE HURT HIS RIGHT AND LEFT HAND (Hand injury (10079099), Limb injury (10061225)(25/Feb/2025 -) - Not Recovered/Not Resolved/Ongoing)

7) IN HIS STOMACH IN THE PART OF THE LEFT RIB HE RECEIVED THE BLOW ON THE TIP OF THE TOILET, WHICH IS A PAIN THAT HE STILL HAS/ he still has pains that still bother him in the rib (Rib pain (10048722), Musculoskeletal chest pain (10050819)(25/Feb/2025 -) - Not Recovered/Not Resolved/Ongoing)

8) RASH (Rash (10037844), Rash (10037844) - Unknown)

9) Irritation on both upper elbows (skin irritation) like a rash. (Skin irritation (10040880), Skin irritation (10040880) - Not Recovered/Not Resolved/Ongoing)

10) Patient had shoulder pain so he must rest constantly/shoulder pain that is still bothering (Shoulder pain (10040617), Arthralgia (10003239)(25/Feb/2025 -) - Not Recovered/Not Resolved/Ongoing)

11) DIZZINESS (Dizziness (10013573), Dizziness (10013573)(08/Mar/2021 -) - Recovered/Resolved)

12) HOT FLASHES HE FEELS IN BOTH FEET AND IN THE BODY (SENSATION OF HEAT) (Hot flashes (10020407), Hot flush (10060800) - Recovered/Resolved)

13) MALAISE (Malaise (10025482), Malaise (10025482) - Unknown)

14) Hot flashes felt in both feet and throughout the body (Hot flashes (10020407), Hot flush (10060800) - Not Recovered/Not Resolved/Ongoing)

Event Description :

This Study report from PANAMA was received by Adium (reference number: PA-0028-20210319) on 08-JUN-2023 from a Consumer via Patient Support Program "ASOFARMA A TU LADO" regarding an Elderly 79 Years old Male patient who experienced Irritation in both elbows in the upper part (Skin irritation), Dizziness (Dizziness), during Eligard (Leuprolide acetate) 45 milligram therapy for Prostate cancer. The needle component of the constituent device was not identified in the report, XTANDI was also considered as suspect. The report was sent to Tolmar on 08-JUN-2023.

The patient's medical history and current conditions included Prostate cancer.

Concomitant medications were not reported.

On 26-MAR-2019, the patient began receiving Eligard 45 milligram, q 6 month via Subcutaneous use for Prostate cancer (Lot numbers and Expiration dates were not provided). On 08-MAR-2021, after four doses of Eligard, the patient experienced Dizziness. On an unspecified date in APR-2023, the patient received Eligard 45 milligram, q 6 month via Subcutaneous use (Lot numbers and Expiration dates were not provided). On 06-JUN-2023, the patient started with irritation in both elbows in the upper part (skin irritation) as if it were a rash. On 08-JUN-2023, the patient will go to the doctor for a consultation and to be prescribed some medication. The patient did not currently use any medication for this symptom. The patient two weeks ago (start date unknown) had the same irritation mentioned above, but the patient was applied a cocoa cream and disappeared. No further details were provided. Corrective treatment was not reported. Action taken with Eligard in response to the events was Dose Not Changed. De-challenge was not applicable, and re-challenge was not applicable. The outcome of Skin irritation was Not Recovered/Not Resolved. The outcome of Dizziness was Unknown.

The reporter did not assess the seriousness or causality of the events in relationship to Eligard.

On 19-JUN-2023, follow-up information was received by Adium via Patient Support Program "ASOFARMA A TU LADO" (reference number: PA-0028-20210319) from the Consumer and sent to Tolmar on 20-JUN-2023. Added events of "rash" (Rash) and "Hot flashes he feels in both feet and in the body (sensation of heat)" (Hot flashes). Updated outcome of Skin irritation.

It was referred that Irritation in both elbows (that started on 06 Jun 2023) in the upper part was not related to the Xtandi medication, that probably these symptoms were due to the heat, because the day after the adverse event was reported he no longer had irritation. The irritation on both elbows in the upper part (skin irritation) was not similar to some kind of eruption, which was like a rash (unknown onset date). Moreover, on an unknown date, the patient experienced some hot flashes, he felt in both feet and in the body (sensation of heat). The physician commented to the patient that it was due to the side effects of the Xtandi medication, that it was normal to feel these symptoms and that it would soon pass. Corrective treatment was not reported. Action taken with Eligard in response to the events was Dose Not Changed. De-challenge and re-challenge were not applicable. The outcome of Skin irritation was Recovered/Resolved. The outcome of Hot flashes was Not Recovered/Not Resolved. The outcome of Rash was Unknown.

The reporter did not assess the seriousness or causality of the events in relationship to Eligard.

Continuation Sheet for CIOMS report

On 29-JUN-2023, follow-up information was received by Adium (reference number: PA-0028-20210319) from the Consumer and sent to Tolmar on 30-JUN-2023. Added events of "feels his right hand asleep" (Numbness in hand), "malaise" (malaise) and "discomfort because when he grabs an object, he does not feel that he is holding it in his hand" (upper extremities discomfort). Updated outcome and reporter causality of hot flashes.

Reportedly, the final result of the adverse event sensation of heat (that had started on an unknown onset date) was recovered and the patient referred that it was related to the medication. Moreover, it was referred that 4 to 5 days ago (Jun 2023), he did not remember the date, he felt his right hand asleep (numbness in hand), it did not cause his malaise (malaise start date was unknown), but it caused his discomfort because when he grabbed an object, he did not feel that he was holding it in his hand (Jun 2023). Corrective treatment was not reported. Action taken with Eligard in response to the events was Dose Not Changed. De-challenge and re-challenge were not applicable. The outcome of Upper extremities discomfort was Unknown. The outcome of Numbness in hand was Unknown. The outcome of Hot flashes was Recovered/Resolved. The outcome of Malaise was Unknown.

The reporter did not assess the seriousness of Upper extremities discomfort and assessed the causality in relationship to Eligard as Not Reported. The reporter did not assess the seriousness of Numbness in hand and assessed the causality in relationship to Eligard as Not Reported. The reporter did not assess the seriousness of Hot flashes and assessed the causality in relationship to Eligard as Related. The reporter did not assess the seriousness of Malaise and assessed the causality in relationship to Eligard as Not Reported.

On 12-JUL-2023, follow-up information was received by Adium (reference number: PA-0028-20210319) from a Consumer and sent to Tolmar on 13-JUL-2023. New information included: no contact information.

Reportedly, a patient's relative did not accept the call and indicated that it be called at another time when the patient was there. Did not provide more information.

Since no new information was provided. This follow up was considered non-significant.

On 31-JUL-2023, follow-up information was received by Adium (reference number: PA-0028-20210319) from a Consumer (patient's relative) and sent to Tolmar on 31-JUL-2023. Added consumer as reporter. Query attempt was completed. The patient's relative did not accept the call and declined to give information.

Since no new information was provided, this follow up was considered non-significant.

On 27-FEB-2025, follow-up information was received by Adium via Patient Support Program (reference number: PA-0028-20210319) from a Consumer/ Other Non-Health Prof and sent to Tolmar on 28-FEB-2025. New information included: added medically significant event of "in his stomach in the part of the left rib he received the blow on the tip of the toilet, which was a pain that he still had" (Rib injury), added new non-serious events of "suffered a fall leaving the bathroom" (Fall), "because of the fall he hurt his right and left hand" (Hand injury), treatment medication, laboratory tests.

On 25-FEB-2025, unknown time after most recent dose of Eligard, the patient suffered a fall when leaving the bathroom as he left the bathroom, he grabbed a lever or curtain rods (it was unknown what exactly he was referring to), and the carpet moved causing him to fall. The patient was conscious, and because of the fall he hurt his right and left hand, since the patient placed both hands in front of him so that his head would not hit the toilet. Further the patient reported that in his stomach in the part of the left rib he received the blow on the tip of the toilet, which caused pain that he still had. Due to this reason, he was not able to go out to the street to request his next box of Xtandi. On the same day, the patient went to the emergency hospital where he had an x-ray, which revealed that there was no fracture, but he did have pain. Corrective treatment was reported as Contractil plus (diclofenac potassium, thiocolchicoside) for rib pain. Action taken with Eligard in response to the events was Dose Not Changed. De-challenge and re-challenge were not applicable. The outcome of Fall was Not Recovered/Not Resolved. The outcome of Rib injury was Not Recovered/Not Resolved. The outcome of Hand injury was Not Recovered/Not Resolved. The outcome of Rib pain was Not Recovered/Not Resolved.

Relevant test results included:

25-FEB-2025: X-ray: revealed no fracture (Ref range: Not provided).

The reporter did not assess seriousness and causality of the events in relationship to Eligard.

On 05-MAR-2025, upon internal review, case upgraded to serious due to medically significant event of "in his stomach in the part of the left rib he received the blow on the tip of the toilet, which was a pain that he still had (Rib injury)" and corrected narrative of version from 27-FEB-2025. No further changes were performed.

On 19-May-2025, follow up information was received via by Adium via Patient Support Program "ASOFARMA A TU LADO ((reference number: (PA-0028-20210319), from a consumer. New information included: Verbatim updated from 'Suffered a fall leaving the bathroom' to 'suffered a fall leaving the bathroom/Patient refers that from the fall of 25-Feb-2025 he still does not feel recovered' (fall) and 'in his stomach in the part of the left rib he received the blow on the tip of the toilet, which is a pain that he still has' to 'in his stomach in the part of the left rib he received the blow on the tip of the toilet, which is a pain that he still has/ he still has pains that still bother him in the rib' (musculoskeletal chest pain). Added a non-serious event 'patient had shoulder pain so he must rest constantly' (arthralgia) was added. Narrative was updated.

On 25-Feb-2025, the patient falls, and he still does not feel recovered because he still had pain which bother his rib and shoulder and he must take rest constantly, but he mentioned he walked and performed his all activities. He mentioned that he manged not to hit his face.

Corrective treatment was unknown.

Action taken with Eligard in response to the events was dose not changed. De-challenge and Re-challenge were not applicable.

Continuation Sheet for CIOMS report

The outcome of fall, musculoskeletal chest pain and arthralgia was not recovered.

The reporter did not assess the seriousness of events fall and musculoskeletal chest pain.

The reporter did not assess the seriousness of event arthralgia.

The reporter did not provide the causality of fall, musculoskeletal chest pain and arthralgia in relationship to Eligard and Eligard Unspecified Device.

No further query was raised.

On 16-Jul-2025, the follow-up information was received via by Adium via Patient Support Program "ASOFARMA A TU LADO ((reference number: PA-0028-20210319 (8))), from a consumer. The report was sent to Tolmar on 17-Jul-2025. New information included: New non-serious event of "Hot flashes felt in both feet and throughout the body" (hot flush), "irritation on both upper elbows (skin irritation) like a rash" (Skin irritation). Clinical details for event dizziness, arthralgia and hypoaesthesia was updated. The outcome of event dizziness was updated from 'unknown' to 'recovered' and the outcome of event hypoaesthesia was updated from 'unknown' to 'not recovered'. The verbatim of event (Hypoaesthesia) was updated from "feels his right hand asleep" to "feels his right hand asleep/ fingers still go numb. I can move my hand, but when I touch or pick up something, I can't feel anything". The verbatim of event arthralgia was updated from "Patient had shoulder pain so he must rest constantly" to "Patient had shoulder pain so he must rest constantly/shoulder pain that is still bothering" The details for co-suspect Xtandi were updated.

On an unknown date, the patient had hot flashes felt in both feet and throughout the body and had irritation on both upper elbows (skin irritation) like a rash. No further details were provided.

On 14-May-2025, the patient fall symptoms still hurts not every day, but it comes and go, and his shoulder pain was still bothering. No further details were provided.

Action taken with Eligard in response to the events was dose not changed. De-challenge and Re-challenge were not applicable.

The outcome of hypoaesthesia, arthralgia, fall, hot flush and skin irritation was not recovered.

The outcome of dizziness was recovered.

The reporter did not assess the seriousness of dizziness, hypoaesthesia, arthralgia, hot flush and skin irritation.

The reporter did not provide the causality of dizziness, hypoaesthesia, arthralgia, hot flush and skin irritation in relationship to Eligard and Eligard Unspecified Device.

No further query was raised.

Listedness of previously reported events were retained as previously assessed.

Company Remarks (Sender's Comments) :

Evaluator Comment (Tolmar): An elderly male patient had Chest injury (in his stomach in the part of the left rib he received the blow on the tip of the toilet, which was a pain that he still had), Fall (suffered a fall leaving the bathroom), Limb injury (because of the fall he hurt his right and left hand), Musculoskeletal chest pain (in his stomach in the part of the left rib he received the blow on the tip of the toilet, which is a pain that he still has), Skin irritation (Irritation in both elbows in the upper part), Limb discomfort (discomfort because when he grabs an object, he does not feel that he is holding it in his hand), Rash (Rash), Hypoaesthesia (feels his right hand asleep/ fingers still go numb. I can move my hand, but when I touch or pick up something, I can't feel anything), Hot flush (Hot flashes he feels in both feet and in the body (sensation of heat)), Dizziness (Dizziness) and Malaise (malaise) during Eligard (Leuprolide acetate) 45 milligram therapy for Prostate cancer. Tolmar assessed Chest injury as medically significant based

on their nature and potential patient jeopardy and the remaining events as non-serious since there was no immediate jeopardy to patient and they did not meet ICH seriousness criteria. Dizziness, Hot flush and Malaise were assessed as related to Eligard drug (unrelated to device) based on temporal relation and known safety profile of the drug. Confounder- Xtandi. Other events were assessed as not related to Eligard (drug and device) based on the etio-pathology of the event, known safety profile of the drug and inconsistency with drug properties. Chest injury, Limb injury and Musculoskeletal chest pain were result of fall which was likely accidental based on the reported sequence of events in the case. Limb discomfort could be in association with Hypoaesthesia. Risk factor- elderly age. Rash was reportedly in relation to Xtandi.

FU-Events hot flush (Hot flashes felt in both feet and throughout the body) and skin irritation (Irritation on both upper elbows (skin irritation) like a rash) were added. Tolmar assessed the reported event as non-serious since it did not meet the ICH seriousness criteria. The causality of event Hot flush was assessed as related to Eligard drug (unrelated to device) based on temporal relation and known safety profile of the drug. The event skin irritation was assessed as not related to Eligard (drug and device) based on the etio-pathology of the event, known safety profile of the drug and inconsistency with drug properties. Causality of previously reported events were retained as previously assessed.
